

QuicDoc[®] Office in the Cloud

QuicDoc Office combines QuicDoc EMR and Office Therapy[®] PM Professional Edition Software, and now QuicDoc Office is available in the Cloud as an internet accessible solution. Cloud-based systems provide users of all sizes and industries great advantages in cost savings, data accessibility, and security. Behavioral and mental health practices now have the advantage of looking to the Cloud for the future of healthcare IT.

The flexibility of accessing your data from anywhere at anytime with an internet connection!

Benefits of a Cloud-Based System

- Implementation is simple with Cloud based systems since software is hosted on the internet instead of your computer. Practices can prevent interruption of cash flow with a quicker implementation process than traditional client-server systems.
- You can access your data using most internet capable devices including those from Apple and Android.
- The Cloud based system is billed as an easy to budget monthly fee, like a utility bill, meaning there's no large, upfront investment.
- IT requirements are significantly reduced when you choose to move clinical and billing records to the Cloud.
- No need to worry, updates are installed automatically.
- A Cloud based system makes it easy to add new users, clinicians, or locations, allowing small practices to think big and grow without breaking the bank.
- Worry-free automatic backup and disaster recovery are provided at no extra charge.

Security in the Cloud

Most providers who are skeptical of cloud-based systems cite security as a primary concern. While uncertainty is understandable, cloud-based systems can actually deliver greater security than client-server systems and paper records. Cloud-based systems achieve HIPAA compliance through data centers with bank-level security and high-level encryption methods that render data unreadable.

Monthly Fees and Subscription Features

Each subscription includes both QuicDoc and Office Therapy. Subscription costs are based on the number of users and include one database for QuicDoc and one database for Office Therapy.
