DocuTrac Adds Electronic Prescribing Capability to QuicDoc®

Hagerstown, Maryland June 3, 2005 – DocuTrac, Inc. (DTI), Behavioral Health Software Development Corporation, announced today that they are adding Electronic Prescribing capability to their QuicDoc Standard and QuicDoc Enterprise Edition Software. The subscription based prescribing system enables providers to write and transmit prescriptions electronically, virtually eliminating rejected prescriptions due to illegibility.

DTI recently released an internet based electronic prescribing component in their Office Therapy™ billing software marketed to solo providers and small group practices. The subscription based system offers electronic prescribing powered by NewCrop a SureScripts-Certified Solution™. SureScripts is the largest network provider of electronic prescribing services.

Currently, DTI is incorporating this same electronic prescribing system into their Standard and Enterprise Clinical Documentation Software QuicDoc®. The QuicDoc Enterprise Edition is being used in hospitals, county mental health facilities, and outpatient and residential treatment facilities. Additionally, Nursing Notes, Vital Signs Monitoring, Physician Order Entry, and Medication Schedule and Dispensing Tracking are also incorporated in the newest version of the QuicDoc Enterprise Software.

QuicDoc®-MD, currently in development, is an independent medical software package which also incorporates electronic prescribing. DTI President Arnie Schuster, Ph.D. states that “Our goal is to provide features that are cutting edge. The more we can offer our end users in the way of improved efficiency and convenience, the greater our product appeal will be.” With the new Electronic Prescription System, users of DTI software will also have the ability to maintain a complete medication and allergy history, check for drug interactions and allergies, check patient specific formulary information, and complete refill authorizations with just a couple of clicks of a mouse.

DTI, located in Western Maryland, launched the first QuicDoc Clinical Information System for DOS in 1993. DTI is committed to incorporating new technologies and advances in their software. For additional information on DTI products visit their web site at www.quicdoc.com or call 800 850-8510.
