

## About Version 9...

### **QuicDoc® Pro – Professional Edition Software** **Office Therapy® Pro – Professional Edition Software**

DocuTrac has added a new product line of Professional Edition software with the release of QuicDoc Version 9 and Office Therapy Version 9. These programs use Microsoft® SQL Server for the backend database. The original Standard Edition software programs use Microsoft Access for their backend database. Version 9 software is being marketed as QuicDoc Pro and Office Therapy Pro - Professional Edition Software.

The line of Professional software provides DocuTrac's customers with more efficiency and reliability in a multi-user environment. Programming the software for a Microsoft SQL Server backend database was a challenging task that demanded extensive development resources. Many customers who upgraded to Version 9 have already benefited from a more efficient system able to run on a wide area network, and one that is better able to scale upwards for growing businesses.

DocuTrac will continue to update and maintain their original Standard versions of QuicDoc and Office Therapy since some customers, who are solo and small group providers, may not immediately realize the same benefits from installing Version 9 as customers in a multi-user environment. With the addition of Version 9 Pro Software DocuTrac customers will be able to choose the version that best suits their needs, whether an individual in a small private practice or part of a larger growing group of providers in a multi-user environment.
