

Working Together To Save You Time...

QuicDoc® for Clinical Records and Office Therapy® for Billing

Integrated Linking

No more double entry for demographic information... When you use both QuicDoc and Office Therapy you can set up the software to automatically transfer demographic data for providers, insurance companies, referral sources, and clients from one program into the other. Once you have set up the data exchange for automatic import, all new as well as updated demographic information for clients is available in both programs.

Convenience

- You can view a client's ledger from Office Therapy right in QuicDoc. This gives you a quick way to view a client's balance, as well as charges and payments without opening Office Therapy
- You can send a record of a documented session from QuicDoc to the Office Therapy Calendar for Charging.
- You can view, as well as edit the Office Therapy Calendar while in the QuicDoc Scheduler
- Data Exchange Match up Utilities: The data exchange utilities allows you to match up providers and clients that may have been previously or inadvertently entered differently in each program.
